

4 Story Lofts

San Francisco, CA

Scenario

A 191 unit high-end condominium property in San Francisco. Limited to just 100 amps of building common area power, this resource needed to be leveraged effectively to avoid a cost prohibitive utility upgrades.

Only 1-2 chargers could be installed before the available common area power would have totally been occupied.

Solution

Initially starting with 4 Tesla owners, EverCharge installed dedicated chargers in each owner's parking space for exclusive use from the 100 amp EV panel. Leveraging EverCharge SmartPower technology this number has now grown to a total of 8 Model S owners efficiently charging with above adequate performance to meet owners needs and the ability to support an additional ~9 more Teslas before any upgrades. EverCharge has worked with the building to develop an upgrade strategy which will affordably serve even more residents and support the building for decades to come.
