

Luxury Condos, San Francisco, CA

Scenario

This 655 unit high-end condominium property in San Francisco sought to install EV chargers for their residents. After an onsite evaluation it was determined there was only enough power in the garage to supply 4 chargers. When capacity was reached, upgrade costs exceeded \$75k for 2 additional chargers.

While this would cover immediate need, many residents had expressed interest in buying an EV in the near future and a more scalable solution was needed.

Solution

Initially starting with 6 EV owners, EverCharge installed dedicated chargers in each owner's parking space for exclusive use. When capacity was reached EverCharge brought in additional service and leveraged SmartPower technology. By doing this EverCharge now supplies service to a total of 33 residents. Without EverCharge upgrades to this building's infrastructure to cover this many residents would have exceed \$300k.
